

CTL Coin100 / 120 **new**

Cost effective high speed coin counter

Ideal for filling small plastic banking sachets

The Coin100 / Coin120 are single denomination coin counting/bagging solutions.

They are mainly used for counting coins or tokens. They can continuously count and count to a pre-set number any pre-sorted coins.

The double dial adjustment allows simple setup. One setting of the dial is enough to select the proper denomination.

* Coins which are smaller by at least 0.5 mm than the present set denomination are off-sorted automatically. Count totals can be stored in memory.

With the CTL Coin100 / Coin 120 counting machines, businesses can quickly and accurately count and sort large quantities of loose coins.

The Coin120 comes with an even greater and motorized hopper capacity. To make service easier, the whole hopper can be lifted without dismounting parts.
